EDUCATION

Shah & Anchor Kutchhi Engineering College Mahavir Education Trust Chowk, W.T Patil Marg, D P Rd, next to Duke's Company, Chembur, Mumbai, Maharashtra 400088

Computer Science Engineering B.Tech

2022 - Present

CGPA: 9.16

Shubhamraje Junior College Ghodbunder Rd, near Hiranandani Estate, Patlipada, Thane West, Thane, Maharashtra 400607

Science Junior College

2020 - 2022

Percentage: 75.33%

Vasant Vihar High School & Jr. College

Vasant Vihar, Thane West, Thane, Maharashtra 400610

Degree in High School

2020

Percentage: 87.2%

EXPERIENCE

Planto AI | AI Traniee

Planto AI is an enterprise AI platform that serves as an intelligent development copilot, using AI to automate coding tasks, reduce bugs, and boost developer productivity by integrating directly into existing workflows.

DeepCytes Cyber Labs UK | Cyber Analyst Fellowship Remote | 10 July 2025 - 31st December 2025

- Executed end-to-end red team operations in controlled lab environments, from initial reconnaissance and vulnerability assessment to successful exploitation and post-exploitation.
- Proactively identified and weaponized vulnerabilities by leveraging a comprehensive toolkit and a deep understanding of modern attack vectors.
- Continuously honed offensive security expertise through dedicated hands-on projects and active mentorship, staying ahead of the evolving threat landscape.

JSW Foundation | Future maker intern Lowrer Parel, Mumbai | 1st September 2025 - 30th November 2025

- Spearheaded the development of original, hands-on STEAM projects and curricula for the Make It Floor, focusing on robotics, coding, and sustainable design to foster creativity and technical skills.
- Pioneered and instructed introductory AI sessions, translating complex concepts like machine learning into engaging, age-appropriate activities using tools like Teachable Machine and interactive demos.
- Mentored students through the project lifecycle, from initial concept and design to building and presenting a functional prototype, emphasizing problem-solving and iterative development.
- Orchestrated and facilitated dynamic learning experiences for large groups students during school events and summer camps, maintaining an inclusive and high-energy environment.

Museum of Solution | Maker Intern Lowrer Parel, Mumbai | 16 June 2025 - 30th November 2025

- Spearheaded the co-creation of new ed-tech curricula for the JSW Foundation, facilitating a collaborative design process between educators and the youth Changemakers Panel to ensure pedagogical excellence and student relevance.
- Operationalized youth voice by systematically embedding feedback from the Changemakers Panel into the program's core framework, directly increasing student engagement and program authenticity.

Google-AICTE | AI-ML Internship

Virtual Internship | July 2024 - September 2024

- Completed an intensive, industry-endorsed AI/ML virtual internship, gaining hands-on experience in Deep Learning and Computer Vision for image-based identification systems.
- Engineered and trained deep learning models to solve practical computer vision problems, specifically focusing on image recognition and classification.
- Built a foundational pipeline for CV projects, gaining practical experience in data preprocessing, model selection, training, and evaluation for visual data.

Shah & Anchor Kutchhi Engineering College | Cyber Defense: A Hands-on Ethical Hacking Internship program

Inhouse internship | 6 June 2024 - 29 June 2024

- Learned about different aspects about cybersecurity
 - A hands on Session on Ethical Hacking
 - How to Secure network ,cloud , emails etc
 - Learned about different Types of attack
- learned different tools used in cybersecurity and also a lot about kali Linux

SKILLS

Programming Languages: C, HTML, CSS, Java, Python, Javascript, php, Typescript
 Libraries/Frameworks: React, vite, flask, FAST API
 Tools / Platforms: Git, VS code, GitHub, Lens Studio
 Databases: MySQL, Mongo DB, Supabase, Neon

PROJECTS / OPEN-SOURCE

Silent_Symphonies | **Link** *HTML ,CSS , Python, Javascript, Python, Botpress, Flask, Socket, Computer Vision, Machine Learning, Google Teachable Machine,Meta Sparks Studio*

- Developed a computer visionbased system to detect and translate sign language gestures (letters, words, numbers) in real time.
- Built the web platform using Flask, integrating a custom Botpress chatbot for guided user navigation.
- Implemented a socket-based messaging system to enable community interaction among hearing-impaired users.
- Designed interactive learning pages to teach sign language to beginners and enthusiasts.
- Created a fun Instagram-style filter for learners to practice and showcase sign language skills.

Carbon-Foot-Print-Calculator | **Link** *HTML, CSS, Javascript,Bootstrap*

- Built a multilevel calculator to help individuals and businesses track and reduce their carbon footprint.
 - Simplified insights on daily emissions with tailored views for personal and business users.
 - Showcased global sustainability organizations, their missions, and initiatives.
- Highlighted key achievements and practical steps for reducing environmental impact.
- Used HTML, CSS, Bootstrap, and JavaScript to create a responsive, user-friendly UI.

Multi-Bank Credit Card Statement Parser | **Link** *Python, Streamlit, PyPDF2, pdfminer.six, pandas, Tesseract OCR, pytesseract, Pillow, Railway*

Built a Streamlit-based web application that extracts and analyzes transactions from multi-bank credit card statements (HDFC, ICICI, Axis, IDFC First, Indian Bank).

Implemented encrypted PDF handling and validation to block corrupted or unsupported PDFs during upload.

Added OCR support using Tesseract to parse scanned PDF statements that do not contain selectable text.

Extracts date, description, credit/debit, amount, and summary data with high accuracy.

Includes features like spending categorization, credit utilization tracking, real-time filtering, CSV export, and visual analytics.

Ensures complete privacy PDFs are processed locally and deleted immediately after analysis.

Deployed using Railway with full GitHub integration.

YOLO-Based Real-Time Object Detection System | **Link** *Python, OpenCV, YOLOv5/YOLOv8, Torch, NumPy, Colab*

Developed a complete object detection pipeline using YOLO with three modes: image detection, video detection, and live webcam detection.

Implemented model loading, pre-processing, bounding-box generation, class labeling, and confidence scoring using Python, PyTorch, and OpenCV.

Achieved high-speed inference with optimized frame-by-frame processing for real-time detection on webcam streams and videos.

Designed a modular, scalable architecture supporting different YOLO weights and custom datasets.

Automated video frame extraction, resizing, and I/O handling for seamless processing of images, recorded videos, and camera feeds.

Published complete working code on GitHub with clear instructions and test examples.

Yelp Review Sentiment Analysis & Prompt Engineering (NLP Project) *Python , NLP , LLM , Prompt Engineering , Machine Learning*

Built an NLP-based model to classify Yelp reviews into positive and negative sentiments using TF-IDF and machine learning classifiers.

Applied text preprocessing, feature extraction, and model evaluation using standard ML metrics.

Evaluated model performance on 200+ real Yelp reviews, achieving 56% accuracy on the full dataset.

Applied prompt optimization on sampled data, resulting in accuracy improvement to 68%, demonstrating the impact of prompt design.

AI-Based Bug Detection System *Python, Machine Learning, Static Code Analysis, NLP*

Designed an AI-driven system to detect code bugs and vulnerabilities using machine learning techniques. Trained models on labeled code snippets to identify syntax errors, logical flaws, and security-related issues.

Implemented preprocessing techniques to extract meaningful features from source code for prediction.

Improved early bug identification, reducing manual debugging effort.

Multi-Version Python Expense Tracker | Link *Python, Flask, SQLite, SQLAlchemy, HTML/CSS/JavaScript, data visualization (charts)*

- Designed and implemented an expense tracking system in Python with three progressive versions.
Version 1: Command Line Interface (CLI) without database tracked expenses in memory.
Version 2: CLI with SQLite + SQLAlchemy added persistent storage and database-backed expense management.
Version 3: Flask-based Web Application interactive GUI with database integration and pie chart visualization for expense insights.
- Demonstrated scalability from basic CLI to full-stack web app with real-time analytics.
- Improved user experience through data visualization and streamlined data management.
